## **DETAILED ACTION**

### ***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on November 24, 2006 has been entered.

### ***Response to Arguments***

2. Applicant's arguments, see Remarks on page 6, filed on November 24, 2006, with respect to claims rejected under 103(a) in the previous office action have been fully considered and are persuasive. The rejection of the claims has been withdrawn.

### ***Allowable Subject Matter***

3. Claims 1 and 3-18 are allowed and renumbered to 1-17.

4. The following is an examiner's statement of reasons for allowance:

The instant invention defines a method and a system for extracting a watermark signal contained in a watermarked digital image sequence, having two or more frames represented by pixel values, wherein the watermark is extracted without using frames from an original unwatermarked digital image sequences. The claimed invention distinguishes over the prior art by the manner in which the steps are processed without reference to the original unwatermarked digital image sequence. The claimed combination allows for improving a method and a system mentioned above. This type of method and system is conventional in the art. However, the prior art of record fails to teach a) estimating pixel correspondences between one or more pairs of frames in the watermarked digital image sequence; b) computing one or more displaced frame difference differences for one or more frames in the watermarked digital image sequence using the pixel correspondences computed in step a) without

reference to the original unwatermarked digital image sequence; wherein step (b) further comprises the steps of: (i) computing, without reference to the original unwatermarked digital image sequence, one or more estimated frames using the pixel correspondence computed in step a), and each estimated frame, which is represented by estimated pixel values, has a corresponding frame in the watermarked digital image sequence; (ii) subtracting estimated pixel values of each estimated frame from pixel values of the corresponding frame of the watermarked digital image sequence to produce the one or more displaced frame differences; and c) extracting the watermark signal from one or more displaced frame differences.

These elements in combination with all of the other elements of the claims are not taught or fairly suggested in the prior art of record. The dependent claims are allowed for the same reasons.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
